Macintosh OS X - Dialup Connection

If you are using Macintosh OS 10.2 you may be able to use the Setup Assistant to setup your Dialup connection. <u>Click here for instructions</u>. Click the Apple menu and choose **System Preferences**.

| 3 | |
|-------|-------------------|
| Abou | it This Mac |
| Get N | Mac OS X Software |
| Syste | m Preferences |

In the System Preferences window, click **Network**. Set the **Location** to **Automatic**, and **Show** to **Modem Port**.

Click the TCP/IP tab.

- Choose to Configure using PPP
- Enter your DNS Numbers into the **Domain Name Servers** box.. Our numbers are 63.77.143.9 and 216.163.120.19

| TCP/IP PPP Prox | ies Modem |
|---|-----------------------------------|
| Configure: Using PPP | • |
| IP Address: (Provided by PPP server) | Domain Name Servers (Optional) |
| | Search Domains (Optional) |
| | Example: apple.com, earthlink.net |

Click the PPP tab.

- Enter LTIS for the Service Provider.
- Type in your Local Access Number into the **Telephone Number** box. This is 685-5555.
- Enter your username into the **Account Name** box, and your password into the **Password** box. Your username should be lowercase with no spaces.

| TCP/IP | PPP Proxies | Modem | |
|-----------------------|--|-----------------------------------|-------------------------------------|
| Service Provider: | | | (Optional) |
| Telephone Number: | | | |
| Alternate Number: | | | (Optional) |
| Account Name: | | - | |
| Password: | ••••• | | |
| Save Checki Checki | password ng this box allows this Internet acco | all users of th unt without en | is computer to tering a password |

Click the **PPP Options** button. Check these two Session options, all other session options are your choice:

- Connect automatically when starting TCP/IP applications
- Disconnect when user logs out

| Session Options: | | |
|--------------------------------------|------|-------------------|
| Connect automatically when starting | g TC | P/IP applications |
| Prompt to stay connected if idle for | 15 | minutes |
| Disconnect if idle for 15 minutes | | |
| 🗹 Disconnect when user logs out | | |
| Redial if busy PPP Provies | | |

The following **Advanced Options** should be checked:

- Send PPP echo packets
- Use TCP header compression

Advanced Options:

| Send PPP echo packets |
|--|
| Use TCP header compression |
| Connect using a terminal window (command line) |
| Use verbose logging |

Click OK.

Click the **Proxies** tab. LTIS does not use proxy servers. These options should **NOT** be checked. Click the **Modem** tab. Choose your modem from the pop up menu. (If your modem came with your computer, it will most likely be listed as Apple Internal 56K Modem (v.90)).

- Turn the **Sound** to **On**.
- If your phone system uses Rotary (Pulse) dialing, change the option to Pulse.

• Put a check mark next to Wait for dial tone before dialing.

| ſ | TCP/IP P | PPP Proxies | Modem |
|----------|-------------------|----------------|--------------------------|
| Modem: | Apple Int | ternal 56K Mod | lem (v.90) 🛟 |
| Sound: | ⊙ On ○ Off | | |
| Dialing: | ⊙ Tone ○ Pulse | 🗹 Wait for d | lial tone before dialing |

Click Save.
